CARLOS

17. $f(x,y) = \operatorname{sen}^2(x-3y)$

$$\frac{\partial F}{\partial x} = \left(\operatorname{sen}^2(x-3y)\right)^2$$

$$\cdot\, 2\operatorname{sen}(x-3y) \cdot \cos(x-3y)$$

$$\frac{\partial F}{\partial y} = 2\operatorname{sen}(x-y) \cdot -3 \cdot \cos(x-3y)$$

$$= -6\operatorname{sen}(x-y) \cdot \cos(x-3y)$$
