30. $\frac{1}{x}+\frac{1}{y}+\frac{1}{z}-1=0 \quad (2,3,6)$

$$\frac{\partial z}{\partial x} = -\frac{\frac{1}{x^2}}{\frac{1}{z^2}} = -\left(-\frac{1}{x^2}\right)\cdot z^2 = -\left(-\frac{1}{2^2}\right)\cdot -6^2 = -\frac{36}{4} = -9$$

$$\frac{\partial z}{\partial y} = \frac{z^2}{y^2} = \frac{6^2}{3^2} = -\frac{36}{9} = -4$$
