35) $w = x^2 + \frac{y}{x}$

$$\frac{\partial w}{\partial v} = \frac{\partial}{\partial x}\left(x^2 + \frac{y}{x}\right) \cdot \frac{d}{dv}(u - 2v + 1) + \frac{\partial}{\partial y}\left(x^2 + \frac{y}{x}\right)\frac{d}{dv}(2u + v - 2)$$

$$= \left(2x - \frac{y}{x^2}\right) \cdot (-2) + \frac{1}{x} \cdot 1$$

$$= \left(2(u - 2v + 1) - \frac{(2u + v - 2)}{(u - 2v + 1)^2}\right) \cdot (-2) + \frac{1}{u - 2v + 1}$$

$$\left.\frac{\partial w}{\partial v}\right|_{u=0,\, v=0} = (2 - (-2)) \cdot (-2) + 1$$

$$= 8 + 1 = -7$$
